### Introduction

### Where Plants Grow

### Types

All plants belong to one of two main groups, vascular plants and nonvascular plants. Vascular plants have special tissues, called xylem and phloem, that carry water and food throughout the plant. Vascular plants also have **roots**, stems, and **leaves**. Vascular plants include herbaceous plants, shrubs, and trees. Herbaceous plants have soft stems. Shrubs and trees have woody stems.

## Table of Contents

Easily navigate articles using the accordion table of contents, enabling students to jump to specific sections effortlessly.

**engineering class**

College students participate in an engineering class on robotics.

Definitions provided by

## Literacy Support

Support independent learning with read-aloud, word-by-word highlighting, and a quick-click Merriam-Webster dictionary.

## Bulleted Lists and Fun Facts

Bulleted lists and fun facts break up text, making it digestible and engaging.

## MOONS

Six of the eight planets have at least one moon. Venus and Mercury are the planets that do not have a moon.

# Navigation and Learning Features

Navigate effortlessly with Britannica School's all-in-one toolbar, right within every article. Centralized tools save time on non-learning tasks: print, cite, adjust fonts, toggle reading level, and share directly to **Google Classroom, Microsoft Teams, or Google Drive** for easy classroom integration.

## Cite

Britannica simplifies teaching the importance of citing sources. This tool can output four styles at every level: MLA, APA, Chicago, and Harvard. Additionally, users have the option to export citations to an existing NoodleTools account.

## Open & Close Sections

Easily open and close all the sections of an article with the flip of a switch.

## Save

Save articles for later by **bookmarking** or saving them to a specific **Resource Pack** to stay organized.

## Translate

Access content in hundreds of languages using this Google-powered translation feature. Hover over translations to strengthen students' English skills by viewing the original text.

## Adjust Font Size

Readers can use these arrows to increase or decrease text for improved readability, ensuring content remains accessible and comfortable for every learner.

## OpenDyslexic Font

This tool was designed for students who benefit from dyslexia-friendly text. Weighted bottoms and unique shapes reduce flipping, supporting smoother, distraction-free reading and a more inclusive experience.

# Why Are Some Features Grayed Out in Translated Articles?

When you use the Google Translate tool on Britannica Library, some features—like Cite, Save, and Read-Aloud—may be disabled. This is because the translated version is generated by Google, not Britannica.

## Citing & Saving

These tools work with Britannica's original content, but since Google generates the translation, citations and saved versions would not reflect the translated text.

## Read-Aloud

This feature reads Britannica's original content and does not support the translated text.

## Sending Articles

When sharing an article, only the original English version is available to avoid confusion.

## Printing

While Britannica does not generate a formatted print page for translations, you may be able to print using your browser's print function.

# Enhanced Differentiation and Integration

## Advanced Search

With **all** the words

With the **exact phrase**

With **any** of these words

**Without** these words

With these words **near** each other

**Pluto**

Pluto as observed by the New Horizons spacecraft, July 13, 2015.

NASA/Johns Hopkins University

**Introduction**

Pluto, large, distant member of the solar system, was regarded as the outermost planet until 2006, when it was reclassified as a dwarf planet. It was discovered in 1930 and was considered the most distant planet in the solar system until the discovery of Eris in 2005. In August 2006, the International Astronomical Union (IAU), the scientific community with authority to define the terms of the solar system, voted to remove Pluto from the list of planets and to create a new classification of dwarf planets. This change in Pluto's classification was based on astronomers' realization that Pluto is not unique in the Kuiper belt, a collection of icy bodies beyond Neptune's orbit. The change in Pluto's classification was based on the realization that Pluto is not unique in the Kuiper belt, a collection of icy bodies beyond Neptune's orbit.

# NEW! ASK Britannica...

YOUR QUESTIONS. OUR ANSWERS, POWERED BY AI.

For generations, knowledge-seekers have turned to Britannica for answers they can trust. Now, we are transforming how you access knowledge with **ASK Britannica**—our AI-powered search assist tool, available now within the Senior level of Britannica School.

## NEW! ASK Britannica... YOUR QUESTIONS. OUR ANSWERS, POWERED BY AI.

How many planets are there in earth's solar system?

← Q1 →

There are eight planets in Earth's solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. These planets orbit the Sun in elliptical paths.

The four inner planets—Mercury, Venus, Earth, and Mars—are called terrestrial planets because they have average densities in the range of 3.9–5.5 grams per cubic cm. The four outer planets—Jupiter, Saturn, Uranus, and Neptune—are giant planets with densities close to 1 gram per cubic cm.

Pluto was considered a major planet until 2006, when it was redesignated as a dwarf planet by the International Astronomical Union (IAU). According to the IAU, a planet must orbit the Sun, be round or nearly round in shape due to its own gravity, and have cleared the neighborhood around its orbit. Pluto does not meet the third requirement because it orbits partially within the Kuiper belt.

New Thread

### How it Works

ASK Britannica answers your questions with information and insights from our wide-ranging collection of articles.

Ask natural-language questions and instantly receive **reliable answers sourced from Britannica's content**.

No sifting through endless results, no distractions, just facts.

### Responsible AI

Britannica is committed to using technology responsibly, especially in our approach to AI, offering new ways to engage with our content.

Unlike open-source AI tools available online, **ASK Britannica is purpose-built for education**—it won't write essays, provide inappropriate answers, or rely on unverified data.

### What ASK Britannica is NOT

It is NOT open source.

It will NOT write papers for students.

It will NOT answer inappropriate queries outside of its educational scope.

# Teach Britannica: Resources for Educators

Teach Britannica is an educator's companion, offering ready-to-use resources that support instruction and enrich classroom learning across all levels of Britannica School. Through this dedicated hub, educators can access tools like graphic organizers, instructional strategies, and lesson minis—all designed to make teaching easier and more impactful.

My Britannica

## Teach Britannica

Educator resources to enhance learning

### Accessing Teach Britannica

Teach Britannica is easily accessible from the **Britannica Education icon** in the main navigation on Britannica School.

#### INSTRUCTIONAL STRATEGY

##### Active Reading Through Writing

Grade: 6-8, 9-12, UNIV

Type: Read Actively / Develop Language (MLL)

30-40 MINUTES

When: Before, during, and after reading

Materials: Active Reading Through Writing graphic organizer, preselected text, whiteboard or display, writing utensil

##### Description

The Active Reading Through Writing strategy encourages students to engage with texts through writing before, during, and after reading to enhance comprehension and critical thinking skills while activating prior knowledge. In addition, this strategy develops students' analytical abilities, reflection skills, and deeper understanding of the material. The strategy prepares students for reading by activating background knowledge. Students process new information during or after reading to support synthesis and connections between texts.

### Instructional Strategies

Access seven categories of **evidence-based methods** for effective education, such as **Acquire Vocabulary** and **Organize Thinking**, which are essential for learning goals of any classroom.

#### LESSON MINI

##### Seasons and Cycles

Grade: K-2

Topic: Science

Unit: Seasons

##### Overview

In this lesson mini, students learn about seasons and their effects on daily life. They observe and record local weather conditions, exploring how these change over time. Students also make observations at different times of year and relate the amount of daylight to each season.

##### Ideas for Implementation

Science  
Library media

Literacy  
Learning centers

### Lesson Minis

**Personalize learning** and boost engagement using these modular minis—ideal for **lesson planning, sub plans, and real-world extension activities**.
